

# MK4 LIP LIGHT.

Originally developed by Cejay Engineering in the 1980's, the Lip Lights design provides Pilots a hands-free illumination device for use during night flight operations. Since its inception, the Lip Lights role and functionality have extended making it a required tool for cockpit, battle tank and flight deck.

The lip light is a focused short-range lighting tool providing the operator with immediate supplemental light to aid in the performance of critical tasks.

The MK4 Lip Light is the first light developed to incorporate the batteries directly into the light itself, making the overall package lighter as well as removing the need for an exterior battery pack and cumbersome power cable.

The MK4 Lip Light uses one SPOT and three FLOOD Super Bright LED's to light the work area. The operator can easily switch between SPOT, FLOOD or SPOT and FLOOD light modes to change the size of the area illuminated via the single mode function button on the front of the unit. SPOT and FLOOD LED's can be ordered in different color combinations allowing the same light to be used in different roles. The mode function button also allows the operator to adjust the lights brightness level providing additional flexibility.

The Mk4 Lip Light is activated by depressing the lip switch on the back of the unit. The MK 4 features a unique lock-out system to prevent the user from inadvertently activating the light when storing or during tactical operations and an adjustable "auto-off" function to maximize battery life. The MK4 Lip Light is available with either a Standard (904220) or Soft Touch (904219) lip switch. The Soft Touch lip switch is suitable for easily bent flex booms such as those booms supplied with Bose®, and MSA Sordin® Headsets.

Since its introduction, the lip light has been widely adopted by civil, military and law enforcement professionals as a necessity for use during low-light operations.

---

Weight	0.7 Ounce   20 Grams with batteries
Size	2.9" x 0.7" x 0.78"   74mm x 18mm x 20mm
Light Modes	SPOT, FLOOD and SPOT and FLOOD
Light Intensity	User controllable brightness level
Switching	Lip switch
Battery	3 x A76 Common Alkaline Batteries
Configuration	3 Flood and 1 Spot Light Emitting Diodes (LED). Flood and Spot can be ordered as the same or different colors
Mounting Options	Universal single microphone boom MK4 Mounting Accessory Kit (904221) for use with certain military boom applications.
