

# PEGASUS™ 6.

The **Pegasus™ 6 Programmer** has been developed to support the command programming of Phoenix 2.5 (902311), Pegasus 4 (902312), Pegasus 7 (902413) and Pegasus 8 (902414) Beacons.

Simple to operate, the programmers backlit LCD display and intuitive navigation provide the ability to record, organize, and store several flash pattern codes in the programmers memory. Stored codes are wirelessly transmitted to Pegasus 4, 7 and 8 beacons as either a single code or batch of codes. If programming Phoenix 2.5 beacons, the user attaches a Phoenix beacon to the programmer. Stored codes are then transmitted to the 2.5's default memory with the push of a button.

All codes stored in the programmers memory can be edited, renamed or deleted as needed by the user. The programmer is powered by a common 9-volt battery or AC power and is easily mastered by the operator.

The Pegasus Programmer is the ideal way to accurately preprogram the Phoenix and Pegasus beacons prior to mission.

## Pegasus 6 Programmer Specifications

Weight	6.8 Ounce   192 Grams
Size	4.5" x 2.8" x 1.35"   14mm x 71mm x 34mm
Switching	Programming buttons Programmable
Display	Backlit LCD
Battery	Common 9 volt or AC power. Programmer provides a battery status indicator
Configuration Options	Factory Upgradeable Software Pegasus 4 Beacons (902312), Pegasus 7 Beacons(902413) , Phoenix 2.5 Beacons (902311), Pegasus 8 Beacons (902414), Vehicle Auxiliary Power Supply (902611).

## Pegasus & Phoenix Beacon Overview

Weight	28 Grams   1 Ounce
Size	38.09 x 15.87mm   1.5" x .625"
Battery	Common 9 volt
Configuration	3 Light Emitting Diodes (LED)
Function	Programmable infrared signaling beacons with the ability store to multiple user defined encoded signals. Designed for use during low light Operations.
